

# **The Fuchs Management System**

## **Quality – The Environment – Health & Safety at Work**

### **The Aim and Purpose of the Quality Management System (ISO 9001:2015)**

The quality management system is a means of ensuring the high quality standards that we set ourselves as a benchmark, and maintaining the standards of quality that our customers expect from us.

The QMS defines all company processes that have a direct or indirect impact on the manufacturing of our products so that we can ensure that we always meet our customers' expectations in terms of quality. It is essential that these processes, once defined, are also implemented in the workplace and continually adjusted to adapt to the needs of the company, our customers and the market.

### **The Aim and Purpose of the Environmental Management System (ISO 14001:2015)**

We strive to be as environmentally friendly as possible and treat our natural resources in a responsible manner so that our children – and our children's children – can grow up in an environment that offers a good quality of life. This is a philosophy that we share with both our customers and our suppliers. We firmly believe that environmental friendliness and commercial success are not mutually exclusive.

Based on these requirements, we are committed to the continuous improvement of our environmental performance and to compliance with all applicable legal requirements and other binding obligations. Our environmental policy provides the framework for defining environmental objectives and specific goals.

### **The Aim and Purpose of the Health & Safety Management System**

One of our other important aims is to make sure that our employees are – and remain – fit and healthy. An efficient occupational health and safety organisation helps us to maintain and continually improve health and safety in the workplace, and also ensures that we comply with all statutory requirements in this area.
